

# Interlan Voodoo Grande

This text is arranged in three columns. Each column is 193 points wide, and they are separated by six points. The are each 660 points tall, extending up from near the bottom of the page. The large text above is positioned 20 points below the top-left of the page. And the rest of this text is a bunch of mindless repeating text which is written solely to demonstrate the word wrapping feature of the PDF munger--er, creator--tool.

## FIRST PARAGRAPH OF MINDLESS TEXT:

What is normalization? --Normalization is a technique of database design that suggests that certain criteria be used when constructing a table layout (deciding what columns each table will have, and creating the key structure), where the idea is to eliminate redundancy of non-key data across tables. Normalization is usually referred to in terms of forms, and I will introduce only the first three, even though it is somewhat common to use other, more advanced forms (fourth, fifth, Boyce-Codd; see documentation).

## SECOND PARAGRAPH OF MINDLESS TEXT:
